Term Project Part - 2

Ali ÖZTÜRK - 150114061

Okan EKE - 150115855

Muhammed Ali DOĞAN - 150115035

First Firm: doktorumonline

This website aims to bring doctors and patients together. There are two entrances: Doctor and Patient. Doctors register to the system by choosing their branches. Then, patients ask questions about the doctors in their diseases. And the doctors answer them. In this way, doctors and patients interview online.

Second Firm: evimdekipsikolog

This website aims to bring psychologist and patients together. So, this system is similar to the first system. There is a group of psychologists. Patients in need of psychological support enter this site and make an appointment with a psychologist. Then, patient and the psychologist interview online.

Our Solution:

We plan to build a system that is not specified for a department like medicine, psychology etc. It aims to build a portal for experts and ones who have questions. Also other website has static messaging system we want build live chat with experts. This system can will be applied for all business solutions such as Teacher-Student, Developer-Customer etc. If requirements and constraints enable us we want to build search engine for department to obtain information directly.

We plan to use extreme programming because our system has small functionalities and we can develop these part to deliver step by step. Also we have limited time and resources. According to changes in limitations we can add extra functionalities or we can reduce some functionalities.
